

LUIS ALBERTO RAMOS QUESADA

SENIOR SOFTWARE ENGINEER | BACKEND DEVELOPMENT | MOBILE APPLICATIONS

Barranquilla, Colombia | +57 313 715 2884 | luisramos21081996@gmail.com

LinkedIn: linkedin.com/in/luis-alberto-ramos-quesada-0052612b6

PROFESSIONAL SUMMARY

Senior Software Engineer and Development Lead with 7+ years of experience designing, building and maintaining production software. Strong background in backend engineering with Go, Node.js, TypeScript, NestJS and Java, including microservices, REST APIs, real-time communications and PostgreSQL. Experience with technical leadership, system integration, Linux deployments and troubleshooting complex production issues. Also builds cross-platform mobile applications using Flutter/Dart, React Native with Expo, and Vue with Capacitor, connecting mobile interfaces to reliable backend services.

TECHNICAL SKILLS

Backend: Go (Golang), Node.js, TypeScript, Java, NestJS, REST APIs, microservices, hexagonal architecture, gRPC, WebSockets, Socket.IO.

Mobile: Flutter, Dart, React Native, Expo, Vue, Capacitor; knowledge of Kotlin and Swift; Android applications, mobile-to-API integration, offline workflows.

Frontend: React, Next.js, Vue, JavaScript, TypeScript.

Data and infrastructure: PostgreSQL, MongoDB, MySQL, SQL Server, Redis, Docker, Linux, Nginx, Git, CI/CD, GitHub Actions.

Engineering practices: API design, asynchronous processing, authentication, idempotency, observability, debugging, performance optimization, code review and technical mentoring.

PROFESSIONAL EXPERIENCE

DEVITECH SAS | Software Development Lead | Feb 2019 - Present

- Lead backend design and development for production systems built with Go, Java, Node.js, TypeScript and NestJS; guide architecture decisions and resolve complex technical issues.
- Develop REST APIs and microservices for transactional workflows, including sales, inventory, electronic invoicing, payments, reporting and third-party integrations.
- Build real-time services using WebSockets and other service-to-service communication mechanisms to support operational systems and device integrations.
- Apply modular and hexagonal architecture, asynchronous processing, concurrency handling, error management and idempotency in critical workflows.
- Work with PostgreSQL, Linux, Docker, Nginx and CI/CD pipelines; troubleshoot production incidents and improve system stability.

DST SAS | Software / Web Developer | Sep 2016 - Feb 2019

- Developed and maintained web applications, backend features and database-driven business workflows.
- Implemented integrations, improved existing code and collaborated on the delivery and maintenance of software solutions.

SELECTED PROJECTS

Factra - Electronic Invoicing and Business Platform: Backend architecture and microservices for invoicing, products, inventory, sales, payments and reporting using Go, Node.js, NestJS and PostgreSQL.

Factra Mobile POS: Mobile point-of-sale application built with Vue and Capacitor, including sales workflows, product scanning, offline transaction handling and later synchronization.

Taxi Mobile App - Personal Project: Developed a taxi-related mobile application as a hands-on project, applying cross-platform mobile development with Flutter/Dart and React Native/Expo.

Industrial and POS Integrations: Backend services integrating operational devices, transaction processing, events and real-time application status.

EDUCATION

Software Development / Software Engineering studies - Politécnico Grancolombiano | 2024 - Present

Technologist in Information Systems Analysis and Development - SENA
