PROFESSIONAL PROFILE

Senior software engineer and development lead with 7+ years building and supporting production systems, including backend services, industrial integrations, business platforms and mobile applications. Experienced in Go, Java, Node.js, NestJS, TypeScript and SQL data systems; hands-on with Linux VPS operations, deployments, testing and production troubleshooting. Familiar with Python, Flutter/Dart, React Native/Expo, Kotlin and Swift. Focused on distributed systems, reliable integrations and pragmatic software architecture.

TECHNICAL EXPERTISE

Backend: Go, Java, Node.js, NestJS, TypeScript, JavaScript, Python; REST APIs, gRPC, WebSockets, microservices, hexagonal architecture, distributed systems, queues and asynchronous processing.

Frontend & Mobile: React, Next.js, Vue, Flutter/Dart, React Native, Expo, Capacitor; Kotlin and Swift knowledge; Android development, API integration and offline-first flows.

Databases: PostgreSQL, SQL Server, MySQL, MongoDB, Redis; database administration, SQL performance and data-driven workflows.

Infrastructure & quality: Linux/VPS, Nginx, Docker, Git, GitHub Actions, CI/CD, manual production deployments, SonarQube, testing, debugging, code review and production incident resolution.

PROFESSIONAL EXPERIENCE

DEVITECH SAS | Software Development Lead / Full Stack & Backend Engineer | Feb 2019 - Present

- Develop and support backend, frontend and database components for production systems, working with Go, Java, Node.js/TypeScript and related web technologies.
- Integrate industrial and operational systems, including fuel dispensers and edge-connected equipment, handling device events, state synchronization and real-time communications.
- Work with distributed systems, message queues, large-scale processing workflows, asynchronous tasks, concurrency and service integrations.
- Carry out DBA-related activities, SQL troubleshooting, production support and maintenance of business-critical data operations.
- Operate Linux VPS environments, configure services, perform manual deployments and production releases, and diagnose live incidents.
- Use testing, SonarQube and code-quality practices while coordinating technical delivery and maintaining existing systems.

DST SAS | Software / Web Developer | Sep 2016 - Feb 2019

- Built and maintained web applications, backend modules, database-driven workflows and integrations; supported fixes and releases of business software.

SELECTED PROJECTS

Factra - Electronic Invoicing Platform: Designed and developed service-based business features around electronic invoicing, sales, inventory, payments, reporting and REST integrations using Go, Node.js/NestJS and PostgreSQL.

Factra Mobile POS - Vue + Capacitor: Built Android-oriented POS workflows for login, product browsing, sales and barcode scanning, with offline transaction capture and later synchronization to backend services. Electronic invoicing is handled through backend integration rather than directly from the phone.

Taxi Mobile App - Personal Project: Mobile application project using Flutter/Dart and React Native with Expo for cross-platform development practice.

Go Hexagonal Architecture Template: Public Go/Gin/PostgreSQL example showing ports and adapters, use cases, repositories and modular API structure. github.com/lrcliche/template_go_hexagonal_free

EDUCATION & LANGUAGES

Politécnico Gran Colombiano - Software Development studies (2024-Present) | SENA - Technologist in Information Systems Analysis and Development

Languages: Spanish (native); English (A2, currently improving).
